

3-N-1 AIRFLOW MESH HAMMOCK :: SET-UP INSTRUCTIONS

1. Remove your AirFlow Mesh hammock from the stuff sac. Make sure you have two included carabiners and two hanging straps handy.

2. Trees that are 8-12 feet apart are perfect for suspending your hammock. Make sure the trees are sturdy enough to hold you and take care not to harm the trees.

3. Wrap one strap around the tree approximately 6 feet off the ground, thread the end with multiple loops through the end with one big loop. Repeat this process on second tree.

4. Attach carabiners to each end of your hammock. Select a strap loop for attaching the carabiners at each end. Adjust as necessary for height by moving carabiner up or down a loop on the strap. Make sure carabiner gate is closed.

5. Enter hammock by backing up to it, open the fabric and sit down in the middle of the hammock. Ideally the hammock will be 18" off the ground with a 30 degree angle between the strap and ground. Swing in your legs and enjoy!

6. Combining hammocks: hold nylon hammock below mesh, attach the carabiners of the nylon hammock to straps one loop above the carabiners for mesh. Engage clips that are at the head and foot of the mesh under the nylon to connect.

VERSITILITY: To hang the Nylon Hammock separately for a friend, complete steps 1-5 with the included additional straps and carabiners.
